(ilmiotorrent.netsons.org).Core.FTP.Pro.v2.1.1637.Incl.Keymaker-. Uled by stoart, 0, . 10 stor Q: Javascript OOP and prototypes I'm playing with JavaScript OOP today and one thing I noticed was that when I tried to set the title property of the function 'name', the prototype property of name had already been overwritten with a function reference. Example: var name = function (){ this.name = ""; this.setTitle = function (title){ this.name = title; } } name.prototype.setTitle = function (){ this.name = "setTitle"; } var n = new name(); n.setTitle("I'm new!"); I expect n.name to be set to "I'm new!" but it turns out that n.name is "setTitle" I can see why it's happening but I don't understand why the prototype property is overwritten. Is this just 2d92ce491b
