Dec 8, 2012 edius 6.08 problem solved! no more of the speech not playing in real time and the audio stop working... edius.01 Nov 30, 2016 The question seems to have been asked before, but I can't find anything in the forum and the answer does not actually work. I also had to download manually the x32 and x64 versions of EDIUS 6.02 and all the other plugins that are listed in the zip file. The only thing that works is the x64 version, the other ones don't even launch. I am using the 64 bit version of Windows and I am absolutely sure that I have 32 bit plugins, because I can run 32 bit programs on my computer. When you say "you have to add a 32 bit plugin in your program", it's not true, I am using the x64 version of EDIUS 6.02 and have never had any problem with it. And yes, when I try to run the x64 version I have this problem... Help, I can't finish this project. Nov 22, 2016 I want to do a quick re-edit. That said, it's not working. Even in the 64 bit version, the x64 plugin is not working. I am 100% sure it's the plugin. I have run Visual Code Clean and Clean all and, even, Windows optimization. Nothing. How can I fix this? Nov 24, 2016 Update: Restoring the default settings didn't fix it, my sound is still not working on the main account. But the x64 plugin is working correctly on my other account. I don't understand. x64 version of EDIUS 6.02, Sound for Java and Native sound, as tested with headphones, works fine on a separate account. So now, the problem seems to be a problem with the main account. I had a problem with it some weeks ago, but that was related to my mum. But I

can't remember what it was... I can watch video, but it's only a very short video and with very little sound. I can't even hear the characters when they talk. It's not working on the main account, neither in the Java and Native versions. The x64 version is working fine. I can open the player, select a file, open the window, but I can't hear anything. I can open another window
