CKEditor is a WYSIWYG(What You See Is What You Get) Rich Text Editor, and also comes with a "Source" view which displays the source of the currently edited text. It is implemented as a text field inside a docking window, to which buttons and other elements can be added. It can be customized in its behavior to fit your needs, and supports many languages, including plain text, BBCode, Markdown, and many others. It can be integrated with other applications. More Info... FPCult is a Free Pascal/Turbo Pascal development environment for Windows. It is a Free Pascal compiler for Win32 systems and comes with a debugger and a hex editor. FPCult is based on the Free Pascal compiler and supports all features, but can be used as a FPC based development environment (link to Lazarus-components) for Windows. Lazarus is a FreePascal and Lazarus IDE that supports most common IDE features, like code completion, auto-formatting and more. It is a great IDE for FreePascal development that will make you forget about the old day of Turbo Pascal. FreePascal/Lazarus is a development environment with a graphical form designer for creating new GUI applications. It is based on the Lazarus Component Package project, which is a FreePascal/Lazarus IDE. The IDE is open source and released under the GPL license. It supports the Lazarus component library. New in Lazarus 1.1: New features of the Lazarus 1.1 IDE: The first big feature in Lazarus is the new form designer. You can get a whole application created in just minutes using the form designer. The form designer is called the Lazarus form editor. With the form designer you can create a form based on the form library and with a single click automatically save your work and close the form you are working on. Every form also has a component list, a list with all components supported by the form. There are two input fields in the component list: the "Source of the component" and the "Compiler". You can also use the "Definition" input field to see the source of the component or the source of the file containing the source of the component. Lazarus offers two different IDE's: Small IDE: If you prefer a small IDE that can support you while working on a small (FPC) application or can be used as an IDE for

System Requirements For Tabitha:

Runtime: 15-25 minutes Liked it? Download it! From the way the project started, there is some feedback that it was made as a bit of a joke but many other people got the idea behind this project. It was made for fun, and even though it is not the game that the developers always wanted to make, it turned out to be a nice little project to make and share. This project was created in only a few days and was done by a teenager with a PC. So, since it was so short
