A software packaging and application installer management solution optimized for use by system administrators. It has a complete set of features to capture, create and edit Windows Installer (MSI) files, perfect for handling legacy software installations or controlling the behavior of Windows Installer packages. In addition, the Pro edition allows you to test and validate packages without affecting production systems. Desktop Authority MSI Studio will help you create and edit MSI files. With the Get Ready to Install (GRI) feature, Desktop Authority MSI Studio generates an automatic Wizard project as the first step in the application installation process. The Wizard is an interactive wizard that walks the user through the remainder of the installation process. The Wizard is ideal for applications that are complex or typically have a multi-step installation process. The AppIEXplorer feature automatically extracts MSI-compliant files from packages, making it easier to test and validate legacy MSI files. This feature is also useful for converting and converting MSI files. Desktop Authority MSI Studio helps you create and edit MSI files. With a powerful GUI, you can configure MSI properties to your exact needs. As an example, you can set a description and a signature for a manifest or you can define conditions under which an installation should be aborted. You can also easily change the required components or the scope of an installation. With the Compare MSI feature, you can view the differences between two MSI files by viewing the changes in the table view with color-coded rows. Using the Set dialog, you can export the differences to a text file or even to a catalog for future use. With the Repackage feature, you can build MSIs by adding package information to a bootstrapped MSI file and build Windows Installer packages (MSI files or MSTs). Create Windows Installer packages by using file CAB files, compressed MSIs or bootstrapped MSIs. You can also create them from certificates. Create MSI projects from cab files, compressed MSIs or bootstrapped MSIs using the Build feature. You can also create a Windows Installer patch from two MSIs. With the Package Manager feature, you can directly create MSI files for immediate distribution through DA's software management. Use Desktop Authority's flexible rules engine to create prerequisites or uninstallation conditions for the MSI packages you create. Use Desktop Authority to create and edit Windows Installer packages with its powerful GUI. You can easily change MSI properties to your exact needs. You can also configure the package by using its Windows Installer database. A flexible rules engine allows you to create conditions for MSI packages that you create. You can even create several rules, each referring to a specific MSI file, and use an appropriate one at the right time, depending on a specific user action. The Package Manager allows you to directly create MSI files for immediate distribution through DA's software management. In addition, Desktop Authority MSI
