I have 3 tables, namely : Student, Exam (to save the exams) and Result (to save the results) The code works, but I want to change it to create the Birthday table only, and create a new StudentBirthday table to save their birthdays. I have tried to do this by creating a model for the StudentBirthday class, and generating the script from this : db.Database.SqlQuery(@"

What's New in the AutoCAD?

Powerful new Markup tool: Deliver precise, easy-to-manage revisions that fit your workflow. Choose from tools that enable you to quickly add, edit, and export annotations, in addition to managing your authoring history and options. (video: 5:03 min.) Markup Peek: Got it all wrong? With just a single click, you can change your mind and get the markups you need, when you need them. Access over a hundred preset styles and apply them to your drawing. Improved 2D Modeling: Get things done faster, with fewer errors and fewer clicks. Leverage the new two-handed methods for manipulating and editing geometry, and transfer, scale, and rotate objects through the CAD Document Browser. Enhanced image management: Create a list of your favorite photos, with the ability to organize them into folders and subfolders, and seamlessly attach them to your drawings. Explore new features in the Image Panel, including drag-and-drop organization, an Object List, and a Search Panel for quick image selection. (video: 1:07 min.) Mesh Design: With Mesh Creation you can make a mesh out of any collection of objects in your drawing. Add holes or cut away parts to get the modeling you need. Content creation from a digital drawing Our innovative drawing management tools enable you to generate content directly from your CAD drawings. In 3D, you can assign a tool to any location on the screen. Use it to create a new geometry shape, rotate, scale, extrude, or change the position of a single object. Transform objects in the drawing automatically. You can define which object properties are used for the change, for example a shape's center point and axis, or use an offset to create an object that you can easily change. In 2D, you can control the drawing of layers, bands, and text, and define the text formatting. Additionally, you can export your objects to other formats, including DXF, DWG, and PDF, and import and re-render documents. Rapidly create content from your digital drawings. This new editing feature has been created using Microsoft's .NET technologies to give you complete control over the model building process. A timeline is available for monitoring tasks and interacting with the model in real-time.
