Tricks for Vision4U How to achieve a professional-looking blur in Photoshop In order to get your desired blur effect, it's important to know where you want the blur to appear and how to achieve the right outcome. Here are a few techniques to achieve a pleasing blur: We will guide you through how to apply the different blurs in Photoshop in no time. 1. Blur of an image For a very soft blur, we would recommend a Gaussian blur in Photoshop. However, this is also the most CPU intensive way to apply blurs. When using the Gaussian blur, make sure to decrease the blur strength to a moderate value, as this is the optimal setting for producing soft and pleasant blurs. To achieve the best results in a moderate blur strength, try the following steps: First of all, we need to create a new layer (Layer > New > Layer from Background). Next, we need to set the layer blend mode to Soft Light (File > Layer > Blending Options > Soft Light), which will produce the most pleasant results, in most cases. Next, we need to drag the layer into the area where we want to blur the image. Next, we need to adjust the brightness and contrast of the layer with the adjustments on the left side

(Control+I). Next, we need to reduce the layer's opacity to 50% (File > Adjustments > Opacity). Next, we need to apply the blur (Filter > Blur > Gaussian Blur) to the layer, setting the values in the box. Finally, we need to adjust the brightness and contrast again with the adjustments on the left side. To obtain a stronger blur, you can create a new layer and decrease the layer's opacity.
