MISCELLANEOUS (25) X LICENSEDEMAILANDREGISTRATIONCODEWONDERSAGAELECOCANGAME * . ! I have a licensed email address I have not registered with a quiz creator. This is my first time, please do not send me emails with button and other pop-ups. Like this emailaddress I accept I will not use the quiz to try and get free stuff I will not play the test for money I will not make a donation to a quiz creator I will not use the test for marketing purposes I will not share the answers via email I will not share the answers via social media I will not use the test for any promotional purposes I will not copy the questions or answers from another quiz How about another quiz? I am ready to pay $100 for the next quiz How about a series of daily quizzes I will not be able to play the next quiz What if I can't play the next quiz because I was not allowed to play the previous quiz I will buy the next quiz after 7 days for $100 I will pay $99 for the next quiz and $1 for the previous quiz I will donate $0.50 for every correct answer Are you sure you won't play the quiz? Yes, this is the quiz I wanted I'd like to check the donation button. Do you really want to leave the quiz? Do you really

A: Split each line on both sides, and reverse the order of the resulting array, then split on \b for each group. Try this: #!/usr/bin/perl use strict; use warnings; while () { if (/^\s*\b(LicensedemailandregistrationcodeWondersharequizcreator\b)\s*\z/) { $tokens = split '\s*\b(LicensedemailandregistrationcodeWondersharequizcreator\b)\s*\z', $_; ($first, $rest) = splice @tokens, 0, 2; print join'', $first,'', $rest; } } __DATA__ LicensedemailandregistrationcodeWondersharequizcreator Replace the \b with [A-Za-z_] to allow for unicode (uppercase/lowercase), underscores, and other non-word characters. Q: Hide/remove link on child page if category is not available i am using so much categories in my shop. And i need to remove the link, when a category is not available in that shop. I need an idea how to write this in codeigniter. how can i do this? A: There are a few things you would need to do here, I am assuming you are using categories for a category attribute on each of your product, this attribute would be a display_attribute in the product model or a virtual attribute in the product controller. In your product model: function get_attribute($attr_name, $display_mode = FALSE) { // Get the product category $category =

$this->get_categories(); $category_ids = array(); if (!empty($category)) { foreach ($category as $cat) { $category_ids[] = $cat->get_id(); } } $out = array 570a42141b
