Q: Want to modify content-type based on file extension using mod\_rewrite I have a few questions about mod\_rewrite: I have a web application that uses a model-view-controller approach (the structure is MVC). When a user requests a certain file, it will load a template file that determines how to render it (in this case it's a QSP page). There are certain templates that I want to include html files with, and certain templates that I want to include as pdfs. The problem is that when I serve up a template file, it comes with the content-type of image/png. This is fine, but I need to serve it up as either html or pdf based on the file extension. The problem is that I'm not really familiar with mod\_rewrite, so I'm not sure how to do this. Here is the.htaccess that I have currently: RewriteEngine on RewriteBase /MyApp/ RewriteCond %{REQUEST\_FILENAME}!-f RewriteCond %{REQUEST\_FILENAME}!-d RewriteRule ^(.\*)\$ app.php [QSA,L] Basically, what this does is redirect any non-existing files or non-existing directories to the script app.php, which will do the redirects and dispense the template. The part that I'm stuck on is how to determine what to do with the file based on the extension. Right now, any html template gets served up as an image, and a PDF gets served as a pdf. This doesn't seem right to me. I'd like for a html template to always be served up as an html file, and a pdf template to be served up as a pdf. Is there some way to do this? I've seen something similar to this done with Mod\_Action, but I can't remember how to do it, and I haven't been able to find anything on Google. A: You could use this rule: RewriteCond %{REQUEST\_FILENAME}!-f RewriteCond %{REQUEST\_FILENAME}!-d RewriteRule ^.\*\.(html|html|pdf|php|js|ico)\$ app.php [

Help guide your workflow with Markup Assist. With the latest Markup Assist technology, you can navigate and annotate 2D and 3D drawings in real-time while using any CAD software. The latest version has been enhanced with a new interface, new commands, and new keyboard shortcuts. (video: 11:12 min.) Text Wrap Graphics: Improve and enhance the text wrap experience in AutoCAD. Now, when you wrap text around a graphic (ex. a line), the line will be filled with a different color to help you better see which line you're editing. (video: 1:15 min.) Create custom shaded and textured linetypes. With these new tools, you can now easily create shaded and textured linetypes based on your existing brushstrokes or your shape. (video: 7:13 min.) Quick Dimensions: Faster dimensioning and an improved measuring and printing experience. When you're in the shape editor, simply select the bounding box and click to set the measure. (video: 1:15 min.) Better Printing Experience: Print your drawings in AutoCAD using a tool that includes modern standard settings and guaranteed print output. (video: 5:42 min.) Mobile Experience: Take your drafting anywhere. New mobile apps let you access and edit drawings on the go. These apps, in addition to all existing mobile apps, feature all the same capabilities as the desktop app. (video: 5:45 min.) AutoCAD Visualize: A comprehensive set of tools to create and share 3D models. This toolset includes both free and paid versions and includes new industry-specific content for creating custom models, sharing and collaborating on models, and documenting models. This feature set is for 3D models only. 2D AutoCAD features are included in the 2D model tools. (video: 5:18 min.) The new AutoCAD 2023 (available now) represents years of AutoCAD innovation and improvements, brought to you by the AutoCAD engineering team and supported by the AutoCAD community.
