Windows UWP Runtime The application manifest has to be adjusted in a way that this changes. Any changes in the application manifest are reflected as changes to the default application manifest, which means that breakages in UWP can easily be caught if application manifests are checked before deployment. In the very beginning of the runtime you first have to check the application manifest of your UWP project and compare it to the current default manifest. In case the two are not equal, you get the difference list: MKAD Never forget to review your application manifests! Windows Store Creation Kit It is recommended to use the latest windows 10 SDK with the latest Windows 10 SDK. The Windows 10 SDK also includes the Windows 10 Native Development Tools, which are included in the Windows SDKs. MKAD The 'kernel debug' target allows you to run Windows built with the Windows SDK on Windows 10 or later. You have to select 'standard' configuration, the 'debug' target is missing. You can also debug x86, x64 and ARM. It uses the Windows Kernel debugging tools included in the Windows SDK (dbghelp.dll). This debugging tool was released with the Windows SDKs of Windows 10. It allows you to set breakpoints and debug code in a kernel mode process. You can debug native libraries, kernel code and core Win32 code. The debugger supports Visual Studio 2017 and the Windows SDK. The Windows 10 SDK also includes the Windows 10 Native Development Tools, which are included in the Windows SDKs. The 'mscorlib' and 'System.Core' include the same content, so if you want to update them, only 'mscorlib' has to be changed.
