Use this program to play macro (keyboard commands) from memory. You can save keyboard commands to file and use them later as individual commands or combine them to create your own. Also, you can share keyboard commands with other users. KEYMACRO allows you to create customized macros that can automate complex tasks such as adjusting EQ, turning up/down the volume or muting/unmuting a track. All macros are saved to a file. Important - The IDE works with a single Mac. Requirements: MacOS 10.4.11 or later You may be required to register the software to use all of its features. Here is where you will create files that will be used in importing modules. The important thing about this is that this is the root of the program's library that includes the commonly used modules. Example: Modules (File Type.pmod) Importing modules is a function that allows you to import individual modules in to a project. This is a function that most other VST software require you to use. In order to use the Importing modules you need to have a project selected. Next the files that have been exported from other applications must be selected. Once you have selected all of the files, just click Import, and the module will be added to the list. The Importing Modules work for VST and AU formats. Once you have imported the module, the associated sounds will be saved in your program library. The Importing Modules allow for the user to have the ability to import and download modules for free. File Type:.pmod File format: VST and AU User Interface: GUI (Graphical User Interface) User guide (for software developers): With Overview: The Media Composer Classroom Studio is a new production toolset that allows you to quickly and efficiently create and produce a TV or radio broadcast.
