Three weeks of closed beta testing have already confirmed the continued evolution of the game's unique Speed of Play, delivering a boot to the head that a player would be forced to turn. Victory is now just moments away. Additional Closed Beta Gameplay Screenshots in the "Behind the Scenes" section are linked to the top of this update. New Features: HyperMotion Technology (HM) HM has been developed and fine-tuned over a two-year period. It is the basis of the dynamic and improved Speed of Play (SOP) introduced in FIFA 20. HM enables us to get closer to the game's real-life players by capturing their physical and tactical movements on the pitch. This includes the ability to show real-life player behaviour and reactions when they are reacting in game, be it tackling, passing and shooting, and choreographing the team's attack and defence. HM introduces a new concept of kit switching for player clothing between various game states. For example, a player can change from his normal kit to his "defense kit" in order to more easily decelerate during a slide tackle. Likewise, when a player receives a knock, the pitch becomes his "kit" - for example, when a goalkeeper enters the field, the players will change their kit. This represents a significant step in the creation of the game's on-pitch experience. True Player Physics (TP) TP is the physics-based system used by the PES engine and will play a key role in the physics simulation of player movements. For FIFA, this includes the control, tension, and release speed of players' movements. New Visuals New animations and improved player models have been added to the game. These include more dynamic and natural movements, with animations that improve the game's mobility. The below animations are included in the Closed Beta: 2D animations: • Guiding the ball • Post-tackle • Striking the ball • Controlled dribbling • Tackling • Head dummies: pic/pik of player blocking the ball • Own penalty kicks (TP) • Own free kicks (TP) • Own set pieces (TP)

FIFA is the one game where rules really matter. In FIFA, the ball will behave naturally; no more predictable rocket shots. No more getting a quick flick pass past you and wondering why your team is suddenly behind. No more endless counter-attacks. Making a correct decision feels fun again. Powered by Football™ Bring the game even closer to the real thing with fundamental gameplay advances. Advanced AI ensures the ball is more unpredictable, while the engine works at peak performance to achieve smoother, more realistic ball control. New corner tactics, defensive play, and off the ball movements all mean a more authentic challenge. New Attacking Intelligence Powered by Sports Interactive and EA SPORTS, the attacking intelligence of this season's FIFA has been improved to better match what you'd see in the real world. The revised attacking intelligence, detailed improvements to decision making and tackling, smarter wayfinding, improved defensive positioning and improved awareness of your opponents' movement mean that passing, dribbling and shooting in FIFA 22 will feel more natural and more accurate than ever. It also means that your player will move more realistically once they receive the ball from a teammate - again, the ball will naturally slip out of your player's hand, rather than bouncing off his foot and rolling away. Football is an evocative and beautiful sport, and this new attacking intelligence adds a new dimension to playing FIFA. Score From Scratch Powered by Sports Interactive and EA SPORTS, this year's FIFA improves the accuracy and realism of all FIFA Career Seasons. Each new season adds a new set of development challenges for players who take ownership of their career and develop within the club, national team or player agency environment. New Conditioning System In FIFA 22, you can shape your player's physical performance to suit the demands of any specific gameplay situation. Training Health Management Equipment Tactical Shape Performance FIFA 22's Conditioning system allows players to balance the demands of each session, week, or even day. By pushing and lifting players, giving them all the recovery time they need, the player's performance can be improved by up to 30%. The Fitness Training system also includes a full weekly training programme, including indoor, outdoor, and sprint/resistance training, as well as a detailed injury report and support for defensive and offensive tactics. The Health Management
